## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 24 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "...the armature plate (46) being disposed on the connection end of the housing component (41) of the pressure regulating valve (12)..." is indefinite. The connection end of the housing component has not been defined.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 15 and 24-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Ricco US 6,131,829. The reference discloses a regulating valve for a fuel injection system of an internal combustion engine having an adjustable housing component which includes a deformable region. See Figures 1-3 showing a compressible washer

Art Unit: 3747

76 made of elastically compressible material provided between the flange 73 and the shoulder 74 to adjust the position of the armature. The housing is assembled using flange 73, the shoulder 74 and the washer 76—therefore the washer is considered to be a housing component.

2. Regarding claim 24, note that the armature includes a plate 37 and an air gap below the plate and the housing which surrounding housing.

3. Regarding claim 25-26, note element 47 acts as a seat ring and includes a throttle restriction 43 therein.

4. Regarding claim 27, note the deformable region 76 extends in the axial direction between a sealing element (O ring near threads 64) and the seat ring 47.

Regarding claim 28, note the deformation is dependent on the mounting force applied to mounting element, or nut ring 96. See columns 2-3 for discussion of the device.

#### ***Allowable Subject Matter***

5. Claims 16-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

Art Unit: 3747

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited documents showing electromagnetic valves having adjustments of various forms.
